

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

CHAPTER 40.

~~POLICY~~ REGULATION FOR NUTRIENT ENRICHED WATERS AND DISCHARGERS WITHIN THE CHESAPEAKE BAY WATERSHED.

9 VAC 25-40-10. Purpose.

This ~~policy~~ regulation provides for the control of discharges of nutrients from point sources affecting state waters that ~~have been~~ are designated "nutrient enriched waters" in 9 VAC 25-260-350 or are located within the Chesapeake Bay watershed, which consists of the following Virginia river basins: Potomac River Basin (9 VAC 25-260-390 and 9 VAC 25-260-400), James River Basin (9 VAC 25-260-410, 9 VAC 25-260-415, 9 VAC 25-260-420, and 9 VAC 25-260-430), Rappahannock River Basin (9 VAC 25-260-440), Chesapeake Bay and small coastal basins (9 VAC 25-260-520, Sections 2 through 3g), and the York River Basin (9 VAC 25-260-530).

The provisions of this regulation and the Water Quality Management Planning Regulation (9 VAC 25-720) constitute the nutrient reduction requirements for point source discharges in the Chesapeake Bay Watershed to protect the Chesapeake Bay and its tidal rivers.

9 VAC 25-40-20. Authority. (Repealed.)

~~The board has adopted this policy under the authority of §§ 62.1-44.15(3), 62.1-44.15(10) and 62.1-44.15(14) of the Code of Virginia.~~

9 VAC 25-40-25. Definitions.

The following words and terms when used in this chapter shall have the following meanings unless the context clearly indicates otherwise:

"Equivalent load" means 2,300 pounds per year of total nitrogen and 300 pounds per year of total phosphorus at a flow volume of 40,000 gallons per day; 5,700 pounds per year of total nitrogen and 760 pounds per year of total phosphorus at a flow volume of 100,000 gallons per day; and 28,500 pounds per year of total nitrogen and 3,800 pounds per year of total phosphorus at a flow volume of 500,000 gallons per day.

"Expansion" or "expands" means initiating construction ~~of a~~ at an existing facility after July 1, 2005, to increase treatment capacity, except that the term does not apply in those cases where a Certificate to Construct was issued on or before July 1, 2005.

"Point source dischargers" or "dischargers" do not include permitted discharges of noncontact cooling water or storm water.

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

9 VAC 25-40-30. Strategy for "nutrient enriched waters-" *outside of Chesapeake Bay Watershed.*

~~As specified here, the board shall reopen the NPDES permits of certain point source dischargers to "nutrient enriched waters" and shall impose effluent limitations on nutrients in the discharges authorized by those permits and certain new permits.~~

A. ~~All dischargers authorized by NPDES VPDES permits issued on or before July 1, 1988, to discharge ≥ 1.0 MGD or more to "nutrient enriched waters" shall be required to meet a monthly average total phosphorus effluent limitation of 2 mg/l as quickly as possible and in any event within three years following modification of the NPDES permit 2.0 mg/l .~~

~~At the time of modification of the NPDES permit, any discharger who voluntarily accepts a permit to require installation and operation of nitrogen removal facilities to meet a monthly average total nitrogen effluent limitation of 10 mg/l for the months of April through October shall be allowed an additional year to meet the phosphorus effluent limitation in 9 VAC 25-40-30-A.~~

B. ~~All New source dischargers as defined in 9 VAC 25-30-10 with a permit issued that commence discharging 9 VAC 25-21 9 VAC 25-31 with a permit issued after July 1, 1988, and a design flow greater than or equal to 0.05 are authorized by VPDES permits to discharge 0.050 MGD who propose to discharge or more to "nutrient enriched waters" shall be required to meet a monthly average total phosphorus effluent limitation of 2 mg/l 2.0 mg/l .~~

C. ~~This policy regulation shall not be construed to relax any effluent limitation concerning a nutrient that is imposed under any other requirement of state or federal law. No time extensions outlined in 9 VAC 25-40-30-A for installation and operation of nitrogen removal facilities shall be granted to a discharger if such an effluent limitation or a time extension is already imposed under any other requirement of state or federal law or regulation.~~

D. ~~Any discharger to "nutrient enriched waters" that is located within the Chesapeake Bay Watershed is not subject to the requirements of this section.~~

9 VAC 25-40-40. Permit amendments.

Whenever the board determines that a permittee has the potential for discharging monthly average total phosphorus concentrations greater than or equal to 2 mg/l 2.0 mg/l or monthly average total nitrogen concentrations greater than or equal to 40 mg/l $4.0 \times 10^1\ 10\text{ mg/l}$ to "nutrient enriched waters," the board may reopen the NPDES VPDES permit to impose monitoring requirements for nutrients in the discharge.

9 VAC 25-40-50. Possibility of further limitations.

The board anticipates that, following implementation of the foregoing requirements and evaluation of effects of this ~~policy~~ regulation and of the results of the nonpoint source control programs, further limitations on discharges of phosphorus or of other nutrients may be necessary to control undesirable growths of aquatic plants.

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

9 VAC 25-40-70. Strategy for Chesapeake Bay Watershed.

A. ~~[In recognition that nutrient reductions from point source discharges have a significant role in the restoration of the Chesapeake Bay and its tidal rivers since they provide a more immediate benefit to water quality and are more reliable than reductions from nonpoint sources, it shall be the policy of the board that point source dischargers within the Chesapeake Bay Watershed utilize biological nutrient removal technology or its equivalent whenever feasible, as provided by subsection B of this section. For the purposes of this chapter and the related sections of 9 VAC 25-720, the terms "point source dischargers" or "dischargers" do not include permitted discharges of noncontact cooling water or storm water operate installed nutrient removal technologies at the treatment efficiency levels for which they were designed.]~~

~~[BA].~~ As specified herein, the board shall issue and reissue the VPDES permits of certain point source dischargers within the Chesapeake Bay Watershed and shall impose effluent concentration limitations on nutrients in the discharges authorized by these permits include technology-based effluent concentration limitations in the individual permit for any facility that has installed technology for the control of nitrogen and phosphorus whether by new construction, expansion, or upgrade. Such limitations shall be based upon the technology installed by the facility and shall be expressed as annual average concentrations .

1. Except as provided under subdivision 4 of this subsection, ~~all significant dischargers, as defined in 9 VAC 25-720, authorized by VPDES permits issued on or before the effective date of this chapter shall achieve an annual average total nitrogen effluent limitation of not more than 8.0 mg/l and an annual average total phosphorus effluent limitation of not more than 1.0 mg/l; provided, however, these dischargers must achieve an annual total nitrogen waste load allocation and an annual total phosphorus waste load allocation as required by the Water Quality Management Planning Regulation (9 VAC 25-720). The applicable limitations shall be achieved within four years following reissuance or major modification of the VPDES permit, but in no case later than December 31, 2010~~ an owner or operator of a facility authorized by a Virginia Pollutant Discharge Elimination System permit first issued before July 1, 2005, that expands his facility to discharge 100,000 gallons or more per day, or an equivalent load directly into tidal waters, or 500,000 gallons or more per day, or an equivalent load, directly into nontidal waters shall install state-of-the-art nutrient removal technology at the time of the expansion and achieve an annual average total nitrogen effluent concentration of 3.0 milligrams per liter and an annual average total phosphorus effluent concentration of 0.3 milligrams per liter .

2. Except as provided under subdivision 4 of this subsection, ~~all dischargers that do not meet the definition of a significant discharger and are authorized by VPDES permits issued on or before July 1, 2004, to discharge 0.040 MGD or more shall be required to achieve an annual average total nitrogen effluent limitation of 8.0 mg/l and an annual average total phosphorus~~

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

~~effluent limitation of 1.0 mg/l. These limitations shall be included in reissued or modified permits after December 31, 2010, and shall be achieved within four years following reissuance or major modification of the VPDES permits an owner or operator of a facility authorized by a Virginia Pollutant Discharge Elimination System permit first issued before July 1, 2005, that expands his facility to discharge 100,000 gallons or more per day up to and including 499,999 gallons per day, or an equivalent load, directly into nontidal waters shall install, at a minimum, biological nutrient removal technology at the time of the expansion and achieve an annual average total nitrogen effluent concentration of 8.0 milligrams per liter and an annual average total phosphorus effluent concentration of 1.0 milligrams per liter .~~

3. Except as provided under subdivision 4 of this subsection, ~~all new dischargers or expanded discharges of nitrogen or phosphorus authorized by VPDES permits issued after the effective date of this chapter to discharge 0.040 MGD or more shall achieve an annual average total nitrogen effluent limitation of 3.0 mg/l and an annual average total phosphorus effluent limitation of 0.30 mg/l~~ an owner or operator of a facility authorized by a Virginia Pollutant Discharge Elimination System permit first issued on or after July 1, 2005, to discharge 40,000 gallons or more per day, or an equivalent load, shall install:

a. At a minimum, biological nutrient removal technology at any facility authorized to discharge up to and including 99,999 gallons per day, or an equivalent load, directly into tidal and nontidal waters or up to and including 499,999 gallons per day, or an equivalent load, to nontidal waters and achieve an annual average total nitrogen effluent concentration of 8.0 milligrams per liter and an annual average total phosphorus effluent concentration of 1.0 milligrams per liter; and

b. State-of-the-art nutrient removal technology at any facility authorized to discharge 100,000 gallons or more per day, or an equivalent load, directly into tidal waters or 500,000 gallons or more per day, or an equivalent load, directly into nontidal waters and achieve an annual average total nitrogen effluent concentration of 3.0 milligrams per liter and an annual average total phosphorus effluent concentration of 0.3 milligrams per liter .

4. On a case-by-case basis, ~~a discharger may demonstrate to the satisfaction of the board through treatability, engineering, or other studies that biological nutrient removal technology or its equivalent at a point source discharge cannot achieve the effluent limitations of subdivision 1, 2 or 3 of this subsection, as applicable. In these cases, the board shall require alternative effluent limitations the board deems appropriate for that discharger;~~ the board may establish a technology-based standard and associated concentration limitation less stringent than the applicable standard specified in subdivision 1, 2 or 3 of this subsection, as applicable, based on a demonstration by an owner or operator that the specified standard is not technically or economically feasible for the affected facility or that the technology-based standard and associated concentration limitation would degrade receiving waters or require the owner or operator to construct treatment facilities not otherwise necessary to

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

comply with his waste load allocation without reliance on nutrient credit exchanges pursuant to § 62.1-44.19:18 of the Code of Virginia, provided, however, the discharger must achieve an annual total nitrogen waste load allocation and an annual total phosphorus waste load allocation as required by the Water Quality Management Planning Regulation (9 VAC 25-720).

5. Any effluent limitation concerning a nutrient that is imposed under any other requirement of state or federal law or regulation that is more stringent than those established herein shall not be affected by this regulation.

~~[CB]~~ *In accordance with Article 1.1 (§ 10.1-1187.1 et seq.) of Chapter 11.1 of Title 10.1 of the Code of Virginia, the board may approve an alternate compliance method to the technology-based effluent concentration limitations as required by subsection B of this section. Such alternate compliance method shall be incorporated into the permit of an Exemplary Environmental Enterprise (E3) facility or an Extraordinary Environmental Enterprise (E4) facility to allow the suspension of applicable technology-based effluent concentration limitations during the period the E3 or E4 facility has a fully implemented environmental management system that includes operation of installed nutrient removal technologies at the treatment efficiency levels for which they were designed.*

~~[C-DC]~~ *Notwithstanding subsections A and B of this section, point source dischargers within the Chesapeake Bay Watershed are also governed by the Water Quality Management Planning Regulation (9 VAC 25-720).*

CHAPTER 720

WATER QUALITY MANAGEMENT PLANNING REGULATION

9 VAC 25-720-10. Definitions.

The following words and terms when used in this chapter shall have the following meanings unless the context clearly indicates otherwise:

"Assimilative capacity" means the greatest amount of loading that a water can receive without violating water quality standards, significantly degrading waters of existing high quality, or interfering with the beneficial use of state waters.

"Best management practices (BMP)" means a schedule of activities, prohibition of practices, maintenance procedures and other management practices to prevent or reduce the pollution of state waters. BMPs include treatment requirements, operating and maintenance procedures, schedule of activities, prohibition of activities, and other management practices to control plant site runoff, spillage, leaks, sludge or waste disposal, or drainage from raw material storage.

"Best practicable control technology currently available (BPT)" means control measures required of point source discharges (other than POTWs) as determined by the EPA pursuant to § 304(b)(1) of the CWA (33 USC § 1251 et seq.) as of 1987.

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

"Board" means the State Water Control Board (SWCB).

"Chesapeake Bay Watershed" means the following Virginia river basins: Potomac River Basin (9 VAC 25-260-390 and 9 VAC 25-260-400), James River Basin (9 VAC 25-260-410, 9 VAC 25-260-415, 9 VAC 25-260-420, and 9 VAC 25-260-430), Rappahannock River Basin (9 VAC 25-260-440), Chesapeake Bay and small coastal basins (9 VAC 25-260-520, Sections 2 through 3g), and the York River Basin (9 VAC 25-260-530).

"Clean Water Act or Act (CWA)" means 33 USC § 1251 et seq. as amended, as of 1987.

~~*"Delivered waste load" means the discharged load from a point source in a river basin that is adjusted by a delivery factor for any alteration of that load occurring from biological, chemical, and physical processes during riverine transport to tidal waters. Delivery factors are calculated using the Chesapeake Bay Program watershed model.*~~

"Delivery factor" means an estimate of the number of pounds of total nitrogen or total phosphorus delivered to tidal waters for every pound discharged from a permitted facility, as determined by the specific geographic location of the permitted facility, to account for attenuation that occurs during riverine transport between the permitted facility and tidal waters. Delivery factors shall be calculated using the Chesapeake Bay Program watershed model.

"Discharge" means when used without qualification, a discharge of a pollutant or any addition of any pollutant or combination of pollutants to state waters or waters of the contiguous zone or ocean or other floating craft when being used for transportation.

"Effluent limitation" means any restriction imposed by the board on quantities, discharge rates or concentrations of pollutants that are discharged from ~~joint~~ point sources into state waters.

"Effluent limitation guidelines" means a regulation published by EPA under the Act and adopted by the board.

"Effluent limited segment (EL)" means a stream segment where the water quality does and probably will continue to meet state water quality standards after the application of technology-based effluent limitations required by §§ 301(b) and 306 of the CWA (33 USC § 1251 et seq.) as of 1987.

"Environmental Protection Agency (EPA)" means the United States Environmental Protection Agency.

"Equivalent load" means 2,300 pounds per year of total nitrogen and 300 pounds per year of total phosphorus at a flow volume of 40,000 gallons per day; 5,700 pounds per year of total nitrogen and 760 pounds per year of total phosphorus at a flow volume of 100,000 gallons per day; and 28,500 pounds per year of total nitrogen and 3,800 pounds per year of total phosphorus at a flow volume of 500,000 gallons per day.

"Load or loading" means the introduction of an amount of matter or thermal energy into a receiving water. Loading may be either man-caused (pollutant loading) or natural (background loading).

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

"Load allocation (LA)" means the portion of a receiving water's loading capacity attributable either to one of its existing or future nonpoint sources of pollution or to natural background sources. Load allocations are best estimates of the loading, which may range from accurate estimates to gross allotments, depending on the availability of data and appropriate techniques for predicting the loading. Wherever possible, natural and nonpoint source loads should be distinguished.

"Nonpoint source" means a source of pollution, such as a farm or forest land runoff, urban storm water runoff, mine runoff, or salt water intrusion that is not collected or discharged as a point source.

"Point source" means any discernible, defined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock vessel or other floating craft, from which pollutants are or may be discharged. This term does not include return flows from irrigated agricultural land.

"Pollutant" means any substance, radioactive material, or heat that causes or contributes to, or may cause or contribute to, pollution. It does not mean:

1. Sewage from vessels; or
2. Water, gas, or other material that is injected into a well to facilitate production of oil, dry gas, or water derived in association with oil or gas production and disposed of in a well, if the well is used either to facilitate production or for disposal purposes if approved by the Department of Mines, Minerals and Energy unless the board determines that such injection or disposal will result in the degradation of ground or surface water resources.

"Pollution" means such alteration of the physical, chemical or biological properties of any state waters as will or is likely to create a nuisance or render such waters (i) harmful or detrimental or injurious to the public health, safety or welfare, or to the health of animals, fish or aquatic life; (ii) unsuitable with reasonable treatment for use as present or possible future sources of public water supply; or (iii) unsuitable for recreational, commercial, industrial, agricultural, or other reasonable uses; provided that: (a) an alteration of the physical, chemical, or biological property of state waters, or a discharge or deposit of sewage, industrial wastes or other wastes to state waters by any owner, which by itself is not sufficient to cause pollution, but which, in combination with such alteration of or discharge or deposit to state waters by other owners is sufficient to cause pollution; (b) the discharge of untreated sewage by any owner into state waters; and (c) contributing to the contravention of standards of water quality duly established by the board, are "pollution" for the terms and purposes of this water quality management plan.

"Publicly owned treatment works (POTW)" means any sewage treatment works that is owned by a state or municipality. Sewers, pipes, or other conveyances are included in this definition only if they convey wastewater to a POTW providing treatment.

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

"Significant ~~discharges~~ discharger" means ~~a point source discharger within the Chesapeake Bay Watershed that is listed in any of the following subsections: 9 VAC 25-720-50 C, 9 VAC 25-720-60 C, 9 VAC 25-720-70 C, 9 VAC 25-720-110 C, or 9 VAC 25-720-120 C; or a new or expanded point source discharger authorized by a VPDES permit issued after July 1, 2004, to discharge 2,300 pounds per year or more of total nitrogen or 300 pounds per year or more of total phosphorus~~ (i) a point source discharger to the Chesapeake Bay watershed with a design capacity of 0.5 million gallons per day or greater, or an equivalent load; (ii) a point source discharger to the Chesapeake Bay watershed east downstream of the fall line with a design capacity of 0.1 million gallons per day or greater, or an equivalent load; (iii) a planned or newly expanding point source discharger to the Chesapeake Bay watershed that is expected to be in operation by 2010 with a permitted design of 0.5 million gallons per day or greater, or an equivalent load; or (iv) a planned or newly expanding point source discharger to the Chesapeake Bay watershed east downstream of the fall line with a design capacity of 0.1 million gallons per day or greater, or an equivalent load, that is expected to be in operation by 2010.

"State waters" means all waters, on the surface and under the ground and wholly or partially within or bordering the Commonwealth or within its jurisdiction, including wetlands.

"Surface water" means all waters in the Commonwealth except ground waters as defined in § 62.1-255 of the Code of Virginia.

"Total maximum daily load (TMDL)" means the sum of the individual waste load allocations (WLA) for point sources, load allocations (LA) for nonpoint sources, natural background loading and usually a safety factor. TMDLs can be expressed in terms of either mass per time, toxicity, or other appropriate measure. The TMDL process provides for point versus nonpoint source trade-offs.

"Toxic pollutant" means any agent or material including, but not limited to, those listed under § 307(a) of the CWA (33 USC § 1251 et seq. as of 1987), which after discharge will, on the basis of available information, cause toxicity.

"Toxicity" means the inherent potential or capacity of a material to cause adverse effects in a living organism, including acute or chronic effects to aquatic life, detrimental effects on human health or other adverse environmental effects.

~~*"Trading" means the transfer of assigned waste load allocations or credits for total nitrogen or total phosphorus among point source dischargers. It does not include the transfer of total nitrogen for total phosphorus, or the reverse.*~~

"Virginia Pollution Discharge Elimination System (VPDES) permit" means a document issued by the board, pursuant to ~~9 VAC 25-30~~ 9 VAC 25-31, authorizing, under prescribed conditions, the potential or actual discharge of pollutants from a point source to surface waters.

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

"Waste load allocation (WLA)" means the portion of a receiving water's loading or assimilative capacity allocated to one of its existing or future point sources of pollution. WLAs are a type of water quality-based effluent limitation.

"Water quality limited segment (WQL)" means any stream segment where the water quality does not or will not meet applicable water quality standards, even after the application of technology-based effluent limitations required by §§ 301(b) and 306 of the CWA (33 USC § 1251 et seq. as of 1987).

"Water quality management plan (WQMP)" means a state- or area-wide waste treatment management plan developed and updated in accordance with the provisions of §§ 205(j), 208 and 303 of the CWA (33 USC § 1251 et seq. as of 1987).

"Water quality standards (WQS)" means narrative statements that describe water quality requirements in general terms, and of numeric limits for specific physical, chemical, biological or radiological characteristics of water. These narrative statements and numeric limits describe water quality necessary to meet and maintain reasonable and beneficial uses such as swimming and, other water based recreation, public water supply and the propagation and growth of aquatic life. The adoption of water quality standards under the State Water Control Law is one of the board's methods of accomplishing the law's purpose.

9 VAC 25-720-30. ~~Reserved.~~ Relationship to 9 VAC 25-40, Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed.

The provisions of this chapter and 9 VAC 25-40, Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed, constitute the nutrient reduction requirements for point source discharges in the Chesapeake Bay Watershed to protect the Chesapeake Bay and its tidal rivers.

9 VAC 25-720-40. ~~Reserved.~~ Trading and offsets Implementing Nitrogen and Phosphorus Waste Load Allocations in the Chesapeake Bay Watershed.

A. Nitrogen and phosphorus waste load allocations assigned to individual significant dischargers in 9 VAC 25-720-50 C, 9 VAC 25-720-60 C, 9 VAC 25-720-70 C, 9 VAC 25-720-110 C, and 9 VAC 25-720-120 C may be ~~traded-exchanged~~ among significant dischargers within the same river basin to assist in the achievement and maintenance of the total basin delivered waste load allocations in accordance with the Chesapeake Bay Watershed Nutrient Credit Exchange Program established under Article 4.02 (§ 62.1-44.19:12 et seq.) of Chapter 3.1 of Title 62.1 of the Code of Virginia. ~~TradesExchanges~~ must account for the delivery factor applicable to each discharge based upon its location within the river basin and calculated by the Chesapeake Bay Program watershed model .

B. Any proposed trade shall not result in degradation or adverse impacts to local water quality or violations of water quality standards.

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

~~C. Any trade of nitrogen or phosphorus waste load allocation among individual significant dischargers shall not result in the exceedence of the total basin delivered waste load allocation within which the significant dischargers are located.~~

~~D. The board may authorize trading only through VPDES permits. Trades conducted in accordance with this chapter through VPDES permits shall not require any amendments to this chapter.~~

~~E. Any discharge of nitrogen or phosphorus load from a new significant discharger or any increase in the discharge of nitrogen or phosphorus load from an expansion of an existing significant discharger that would exceed the waste load allocation for that significant discharger shall be accompanied by one of the following actions within the same river basin: (i) a trade for an equivalent or greater load reduction of the same pollutant from one or more existing dischargers; (ii) in accordance with the criteria listed below, the installation, monitoring and maintenance of best management practices that achieve an offsetting reduction of nonpoint source delivered load of nitrogen or phosphorus that the board determines is at least twice the reduction in delivered load compared to the new or increased delivered load from the significant discharger; or (iii) both actions in combination.~~

~~The board may approve use of the second option (clause (ii)) in the previous paragraph in accordance with the following:~~

- ~~1. The VPDES permit for the new or expanded significant discharger includes an annual average total nitrogen effluent limitation of 3.0 mg/l or an annual average total phosphorus effluent limitation of 0.30 mg/l, as appropriate, or alternative limits as required by 9 VAC 245-40-70 B 4;~~
- ~~2. Best management practices are installed within the locality or localities served by the new or expanded discharger, unless the board determines that installation of the needed best management practices in another locality provides greater water quality benefits;~~
- ~~3. Credit may be given for improvements to best management practices beyond that already required under other federal or state law to the extent that additional reduction in delivered nitrogen or phosphorus load is provided;~~
- ~~4. Credit may not be given for portions of best management practices financed by government programs; and~~
- ~~5. The installation, monitoring and maintenance of the best management practices are required by the VPDES permit of the new or expanded significant discharger and the best management practices are installed subsequent to the issuance of the VPDES permit.~~

~~F. Any trade or offset involving a new significant discharger must account for the delivery factor that is assigned to the discharger based on its location within the river basin and must recognize that new significant dischargers have no assigned waste load allocations.~~

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

~~To ensure the total basin delivered loads of nitrogen and phosphorus are not exceeded, any trading or offsets conducted in accordance with this section shall use delivered loads. The following table contains the delivery factors for both nitrogen and phosphorus assigned to the identified Chesapeake Bay Program watershed model segments within each river basin. A delivered load equals the discharged load multiplied by the delivery factor.~~

<i>River Basin</i>	<i>CBP Watershed Model Segment</i>	<i>Nitrogen Delivery Factor</i>	<i>Phosphorus Delivery Factor</i>

<i>C. Bay-Eastern Shore</i>	<i>440</i>	<i>1.00</i>	<i>1.00</i>

NOTE: *Drainage to Occoquan Reservoir—delivery factors = 0.58 for nitrogen; 0.44 for phosphorus. Drainage outside Occoquan Reservoir—delivery factors = 1.00 for both nitrogen and phosphorus.

B. The nitrogen and phosphorus waste load allocations assigned to individual significant dischargers in 9 VAC 25-720-50 C, 9 VAC 25-720-60 C, 9 VAC 25-720-70 C, 9 VAC 25-720-110 C, and 9 VAC 25-720-120 C are considered to be bioavailable to aquatic life. On a case-by-case basis, a discharger may demonstrate to the satisfaction of the board that a significant portion of the nutrients discharged by the facility is not bioavailable to aquatic life. In these cases, the board may limit the permitted discharge to reflect only that portion of the assigned waste load allocation that is bioavailable. [Such limits shall be consistent

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

with the assumptions and methods used to derive the allocations through the Chesapeake Bay watershed and water quality models.]

C. Unless otherwise noted, the nitrogen and phosphorus waste load allocations assigned to individual significant dischargers in 9 VAC 25-720-50 C, 9 VAC 25-720-60 C, 9 VAC 25-720-70 C, 9 VAC 25-720-110 C, and 9 VAC 25-720-120 C are considered total loads including nutrients present in the intake water from the river, as applicable. On a case-by-case basis, an industrial discharger may demonstrate to the satisfaction of the board that a significant portion of the nutrient load originates in its intake water. In these cases, the board may limit the permitted discharge to reflect only the net nutrient load portion of the assigned waste load allocation. [Such limits shall be consistent with the assumptions and methods used to derive the allocations through the Chesapeake Bay watershed and water quality models.]

[D. The Board may amend this regulation to adjust individual nitrogen and phosphorus waste load allocations. Reasons for considering such an adjustment include, but are not limited to:

1. a discharger completes or does not complete a plant expansion as evidenced by issuance of a Certificate To Operate by December 31, 2010; or
2. a river basin nutrient load allocation is not achieved.

Any adjustment to an individual waste load allocation must ensure water quality standards are maintained.]

9 VAC 25-720-50. Potomac, Shenandoah River Basin.

TABLE B2 - NOTES: POTOMAC RIVER SUB-BASIN - RECOMMENDED PLAN FOR WASTEWATER TREATMENT

FACILITIES

(1) Year 2000 design flow 201 Facility Plan, P.L. 92-500, unless otherwise noted.

(2) Year 2000 average flow from Potomac/Shenandoah 303(e) Plans, Vol V-A Appendix, 1975 pp. B-33-B-44.

(3) Future expansion at unspecified date.

(4) Secondary treatment: 24-30 mg/l BOD₅, advanced secondary treatment (AST): 11-23 mg/l, advanced wastewater treatment (AWT): <10mg/l BOD₅. A range is given to recognize that various waste treatment processes have different treatment efficiencies.

(5) Effluent limits calculated using mathematical modeling.

(6) Effluent limits based on Occoquan Watershed Policy, presented under reevaluation.

(7) Effluent limits based on treatment levels established by the Potomac/Shenandoah 303(e) Plan, Vol. V-A 1975, p. 237, to protect low flow streams and downstream water supply.

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

⁽⁸⁾ Effluent limits based on Potomac River Embayment Standards, presently under reevaluation. Nitrogen removal limits deferred until reevaluation is complete.

⁽⁹⁾ Effluent limits based on Dulles Watershed Policy, recommended for reevaluation. Interim effluent limits of 12 mg/l BOD₅ and 20 mg/l Suspended Solids will be met until the Dulles Area Watershed Standards are reevaluated.

⁽¹⁰⁾ Effluent limits based on Virginia Sewerage Regulation, Section 33.02.01.

⁽¹¹⁾ Interim effluent limits of 30 mg/l BOD₅, 30mg/l Suspended Solids, and 4 mg/l Phosphorus, will be effective until average daily flows exceeds 0.75 MGD. At greater flows than 0.75 MGD, the effluent limitations will be defined by the Potomac Embayment Standards.

⁽¹²⁾ Secondary treatment is permitted for this facility due to the the extended outfall into the main stem of the Potomac River.

⁽¹³⁾ This facility was also included in the Rappahannock Area Development Commission (RADCO) 208 Areawide Waste Treatment Management Plan and Potomac-Shenandoah River Basin 303 (e) Water Quality Management Plan.

TABLE B3 - SHENANDOAH RIVER SUB-BASIN RECOMMENDED SEGMENT CLASSIFICATIONS

SEGMENT NUMBER	DESCRIPTION OF SEGMENT	MILE TO MILE	CLASSIFICATION
1-1	North River-main stream and tributaries excluding segments 1-1a, 1-1b	56.4-0.0	EL
1-1a	Muddy Creek-main stream and War Branch, RM 0.1-0.0	3.7 - 1.7	WQ
1-1b	North River-main stream	16.1 - 4.6	WQ
1-2	Middle River-main stream and tributaries excluding segments 1-2a, 1-2b	69.9 - 0.0	EL
1-2a	Middle River-main stream	29.5 - 17.9	WQ
1-2b	Lewis Creek-main stream	9.6 - 0.0	WQ
1-3	South River-main stream and tributaries excluding segment 1-3a	52.2 - 0.0	EL
1-4	South Fork Shenandoah-main stream and tributaries excluding segments 1-4a, 1-4b, 1-4c	102.9 - 0.0	EL
1-4a	South Fork Shenandoah-main stream	88.1 - 78.2	WQ
1-4b	Hawksbill Creek-main stream	6.20 - 0.0	WQ
1-4c	Quail Run-main stream	5.2 - 3.2	WQ
1-5	North Fork Shenandoah- main stream and tributaries excluding segment 1-5a, 1-5h	108.9 – 0.0	EL
1-5a	Stony Creek-main stream	19.9 - 14.9	WQ

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

1-5b	North Fork Shenandoah-main stream	89.0 - 81.4	WQ
1-6	Shenandoah River-main stream and tributaries excluding segments 1-6a, 1-6b	57.4 - 19.8	EL
1- 6a	Stephens Run-main stream	8.3 - 0.0	WQ
1-6b	Dog Run-main stream	5.2 - 0.0	WQ
1-7	Opequon Creek-main stream and tributaries excluding segments 1-7a, 1-7b	54.9 - 23.6	EL
1-7a	Opequon Creek-main stream	32.3 - 23.6	WQ
1-7b	Abrams Creek-main stream	8.7 - 0.0	WQ
1-8	All Virginia streams upstream of Opequon-Potomac confluence that have headwaters in Frederick County	--	EL
1-9	All Virginia streams upstream of Opequon-Potomac confluence that have headwaters in Highland County	--	EL

* R.M. = River Mile, measured from the river mouth

TABLE B4 - SHENANDOAH RIVER SUB-BASIN - RECOMMENDED PLAN FOR SELECTED INDUSTRIAL WASTEWATER TREATMENT FACILITIES

FACILITY NUMBER	NAME ⁽¹⁾	INDUSTRIAL CATEGORY	RECEIVING STREAM CLASSIFICATION	RECOMMENDED WASTELOAD ALLOCATION ⁽²⁾			COMPLIANCE SCHEDULE

35	O'Sullivan	Rubber Processing* Machinery and Mechanical Products Manufacturing	Abrams Creek WQ (I-7b)	BPT Effluent Limits			None

TABLE B4 - NOTES: SHENANDOAH RIVER SUB-BASIN - RECOMMENDED PLAN SELECTED INDUSTRIAL WASTEWATER TREATMENT FACILITIES

- (1) An * identifies those industrial categories that are included in EPA's primary industry classification for which potential priority toxic pollutants have been identified.
- (2) Allocation (lb/d) based upon 7Q10 stream flow. Tiered permits may allow greater wasteloads during times of higher flow. BPT = Best Practicable Technology.
- (3) A summer 1979 stream survey has demonstrated instream D.O. violations. Therefore, the identified wasteload allocation is to be considered as interim and shall be subject to further analysis.
- (4) The NPDES permit does not specify TKN but does specify organic-N of 85 lb/d. TKN is the sum of NH -N and organic -N.
- (5) This allocation is based upon a flow of 0.847 MGD.
- (6) The total assimilative capacity for segment WQ (1-5b) will be developed from an intensive stream survey program and development of an appropriate calibrated and verified model. Wasteload allocations for National Fruit, Rockingham Poultry and Shen-Valley will be determined after the development of the calibrated and verified model and the determination of the segment's assimilative capacity.

TABLE B5 - NOTES: SHENANDOAH RIVER SUB-BASIN - RECOMMENDED PLAN FOR SELECTED MUNICIPAL WASTEWATER TREATMENT FACILITIES

⁽¹⁾ Year 2000 design flow (MGD) unless otherwise noted.

⁽²⁾ Secondary treatment: 24-30 mg/l BOD₅, advanced secondary treatment (AST): 11-23 mg/l BOD₅, advanced wastewater treatment (AWT): <10 mg/l BOD₅. A range is given to recognize that various waste treatment processes have different treatment efficiencies.

⁽³⁾ Recommended wasteload allocation calculated using mathematical modeling based upon 7Q10 stream flows. Tiered permits may allow greater wasteloads during periods of higher stream flows. Allocations other than BOD₅ are noted by footnote.

⁽⁴⁾ The July 1, 1983, data is a statutory deadline required by P.L. 92-500, as amended by P.L. 92-217. The timing of construction grant funding may result in some localities to miss this deadline.

⁽⁵⁾ Year 2008 design.

⁽⁶⁾ This BOD loading is based on a 7Q10 flow rate of 26.8 cfs at the HRRSA discharge.

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

⁽⁷⁾ NH₃ -N = 50 lb/d.

⁽⁸⁾ This allocation is based on a TKN loading no greater than 84 lb/day.

C. Nitrogen and phosphorus waste load allocations to restore the Chesapeake Bay and its tidal rivers.

The following table presents nitrogen and phosphorus waste load allocations for the identified significant dischargers, ~~the associated delivery factors used for trading or offset purposes,~~ and the total nitrogen and total phosphorus ~~delivered~~ waste load ~~allocation~~ allocations for the **basin listed facilities**. ~~These individual significant discharger waste load allocations may be revised through the watershed trading program contained in 9 VAC 25-720-30. The waste load allocation listed below for a discharger, or the waste load allocation revised in accordance with 9 VAC 25-720-30, shall be achieved within four years following reissuance or modification of the discharger's VPDES permit, but in no case later than December 31, 2010.~~

9 VAC 25-40. Regulation for Nutrient Enriched Waters and Dischargers within the Chesapeake Bay Watershed (amending 9 VAC 25-40-10, 9 VAC 25-40-30, 9 VAC 25-40-40, and 9 VAC 25-40-50; adding 9 VAC 25-40-25, 9 VAC 25-40-70; and repealing 9 VAC 25-40-20. 9 VAC 25-720. Water Quality Management Planning Regulation (amending 9 VAC 25-720-10, 9 VAC 25-720-50, 9 VAC 25-720-70, 9 VAC 25-720-110); adding 9 VAC 25-720-30, 9 VAC 25-720-40)

2 Based on 2020 loads or stream assimilative capacity less 20%.

3 Load allocation based on published NPDES permits.

4 This assimilative capacity is based upon an ammonia loading no greater than 125.1 lbs/day.

5 Percentages refer to reserve as percent of total assimilative capacity. Minimum reserve for future growth and modeling accuracy is 20% unless otherwise noted.

6 No NPDES Permits published (BPT not established) allocation base on maximum value monitored.

7 This table is for the existing discharge point. The recommended plan may involve relocation or elimination of stream discharge.

8 Assimilative capacity will be determined upon completion of the ongoing study by Hydroscience, Inc.

9 Discharges into Karnes Creek, a tributary to the Jackson River.

10 Discharges into Wilson Creek, near its confluence with Jackson River.

11 Five-day Carbonaceous Biological Oxygen Demand (cBOD5).

12 Revision supersedes all subsequent Crewe STP stream capacity, allocation, and reserve references.

13 0.4 percent reserve: determined by SWCB Piedmont Regional Office.

TABLE B5 - NOTES:

N/A Currently No BOD5 limits or wasteload have been imposed by the VPDES permit. Should BOD5 limits (wasteload) be imposed a WQMP amendment would be required for water quality limited segments only.

1 Secondary treatment levels are required in effluent limiting (E.L.) segments. In water quality limiting (W.Q.) segments quantities listed represent wasteload allocations.

2 Ending river miles have not been determined for some Effluent Limited segments.

3 These allocations represent current and original (1977 WQMP) modeling. Future revisions may be necessary based on Virginia State Water Control Board modeling.

4 The total assimilative capacity at critical stream flow for this portion of Segment 2-2 has been modeled and verified by Hydroscience, Inc. (March 1977) to be 4,914 kg/day BOD₅.

5 The discharge is to an unnamed tributary to the Jackson River at Jackson River mile 22.93.

6 The discharge is at Jackson River mile 19.22.

7 The discharge is to the mouth of Karnes Creek, a tributary to the Jackson River at Jackson River mile 5.44.

8 The discharge is at Jackson River mile 6.67.

9 The discharge is at Jackson River mile 5.14.

10 The discharge is at Jackson River mile 4.72.

11 The discharge is at Jackson River mile 3.46.

12 The discharge is at Jackson River mile 1.17

13 The discharge is at Jackson River mile 0.76

14 The discharge is to the mouth of Wilson Creek, a tributary to the Jackson River at Jackson River mile 2.44.

15 The discharge is to the mouth of Eagle Rock Creek, a tributary to the Jackson River at Jackson River mile 330.35.
