

Allocating Allowances in an Emissions Trading Program

August 21 Public Webinar

At its meeting August 3rd meeting, the Regulatory Advisory Panel (RAP) for the CO2 Trading Regulation discussed a desire to learn more about the various options for allocating allowances. Members of the RAP and the public are invited to a webinar on the topic hosted by the Georgetown Climate Center.

Public Informational Webinar

Date: Monday, August 21, 2017

Time: 10:00 to 11:30 AM Eastern

Presenters: Franz Litz, Principal, Litz Energy Strategies LLC
Kate Zyla, Deputy Director, Georgetown Climate Center

Topic: *Allocating Allowances in an Emissions Trading Program*

Description: The webinar will provide a survey of the various options for allocating allowances in an emissions trading program and their implications. Among the options to be explored are direct allocation on the basis of generation (or output), emissions or other metric, as well as the distinction between historical and updating allocation. The webinar will touch on the topic of consignment auctions but that topic is to be covered in depth on an another webinar to be held on August 28th at 10 am.

Webinar Recording: A webinar recording will be available on Georgetown Climate Center's website after the event.

Resource: Franz is the coauthor, with Duke Economist Brian Murray, of a recent discussion paper on allowance allocations in the context of the federal Clean Power Plan that may be a useful primer for thinking about allocation options in emissions trading programs more generally.
